Github Repo: [Mihir-Mungara-Simform/Git_Assignment](#)

Created a new repository using template :-

The screenshot shows a GitHub repository page for 'Git_Assignment'. The repository is public and was generated from 'Mihir-Mungara-Simform/Template_Repo'. It has 1 branch and 0 tags. The main branch is 'main'. There is 1 commit by 'Mihir-Mungara-Simform' titled 'Initial commit' made 1 hour ago. A file 'README.md' was also committed at the same time. The 'README' file is visible in the repository tree, showing the text 'Template Repo' and 'Template Repository'.

Setting Up Git Flow :-

```
mihir.mungara@SF-CPU-822 MINGW64 ~/Desktop/Git_Exercise (master)
$ git flow init
No branches exist yet. Base branches must be created now.
Branch name for production releases: [master] main
Branch name for "next release" development: [develop]

How to name your supporting branch prefixes?
Feature branches? [feature/]
Release branches? [release/]
Hotfix branches? [hotfix/]
Support branches? [support/]
Version tag prefix? []

mihir.mungara@SF-CPU-822 MINGW64 ~/Desktop/Git_Exercise (develop)
$ |
```

Created a feature branch for project setup with the proper Zoho task ID :-

```
mihir.mungara@SF-CPU-822 MINGW64 ~/Desktop/Git_Exercise (develop)
$ git flow feature start TE-T84_Project_Setup
Switched to a new branch 'feature/TE-T84_Project_Setup'

Summary of actions:
- A new branch 'feature/TE-T84_Project_Setup' was created, based on 'develop'
- You are now on branch 'feature/TE-T84_Project_Setup'

Now, start committing on your feature. When done, use:

git flow feature finish TE-T84_Project_Setup
```

Created a sub-branch from the project setup branch to perform squash, reset, rebase and cherrypick :-

```
mihir.mungara@SF-CPU-822 MINGW64 ~/Desktop/Git_Exercise (feature/TE-T84_Project_Setup)
$ git checkout -b TE-T84_Project_Testing
Switched to a new branch 'TE-T84_Project_Testing'
```

Done commits to perform squash, reset, rebase and cherrypick :-

```

- 4) Create PR to develop. And
- 5) PR should be small in size, It's recommended to do one commit per PR. However, based on the situation we can have multiple commits in PR. e.g. if someone is doing 10 bug fixes which are one-liner fixes in such cases instead of 10 different PRs you can do 10 commits in a single PR.

Pushed on remote repo :-

Raised a Draft PR to develop and kept it in Review state :-

Open a pull request

Create a new pull request by comparing changes across two branches. If you need to, you can also compare across forks. [Learn more about diff comparisons here.](#)

The screenshot shows the GitHub interface for creating a pull request. At the top, there are dropdown menus for 'base: develop' and 'compare: TE-T84_Branch1'. A green checkmark indicates 'Able to merge. These branches can be automatically merged.' Below this, there are sections for 'Add a title' (containing 'Te t84 branch1') and 'Add a description' (containing 'Merging to Develop'). On the right side, there are settings for 'Reviewers' (No reviews), 'Assignees' (No one—[assign yourself](#)), 'Labels' (None yet), 'Projects' (None yet), 'Milestone' (No milestone), and 'Development' (using [Closing keywords](#) in the description to automatically close issues). A 'Draft pull request' button is at the bottom. A note at the bottom left says 'Markdown is supported' and 'Paste, drop, or click to add files'.

The screenshot shows the GitHub pull request review interface. It displays two status cards: 'No conflicts with base branch' (green checkmark) and 'This pull request is still a work in progress' (info icon). The second card includes a 'Ready for review' button. At the bottom, there is a 'Merge pull request' button and a note about using the command line. A note at the bottom left says 'You can also merge this with the command line. [View command line instructions.](#)'
